SHY ZIP Track System

Originally developed for the bullet trains in Japan, the SHY ZIP tracking system is a proven method of locking a vast array of fabrics into the side track. Like bullet train shades, it is necessary for exterior shades for homes and businesses to be as stable as possible, minimizing excessive movement of the fabric due to wind and outdoor elements. This system is now available to the Americas exclusively through Arquati. Use it in conjunction with our SCREENLIGHT shading systems to create the most innovative solution for solar heat, noise, and insect intrusion control.

Even with excessive pressure directly applied to the fabric, it remains tightly locked into the side tracks for superior fabric stability. The shock absorbers placed between the PVC channel and the inside edge of the aluminum track keep most of the tension off of the zipper and maintain the bottom bar level. Inside or outside mounted, Screenlight w/SHY ZIP is easily installed onto most surfaces.

Ideal applications include:

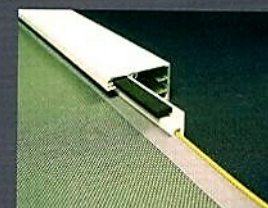

- Windows (interior or exterior)
- Screen room enclosures
- Garage door openings
- Patio Covers
- Skylights
- exterior black-out screens
- Outdoor restaurant dining enclosures
- Outdoor smoking area enclosures
- Residential & commercial verandas

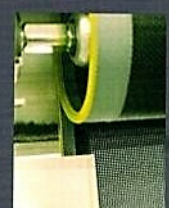

Fabric securely fastened into side tracks - even with excessive pressure
